Summary

Full-Stack Developer (.NET & Angular) engineering scalable back-end systems using Clean Architecture and CQRS, alongside responsive front-end interfaces. Delivering high-performance, end-to-end business solutions including comprehensive E-Commerce platforms by translating complex requirements into maintainable, production-ready code.

Skills

- **Back-End:** C#, .NET Core, ASP.NET Web API, EF Core, ADO.NET, LINQ, Dependency Injection.
- **Front-End:** Angular, TypeScript, JavaScript, HTML5, CSS3, Tailwind.
- **Database:** SQL Server.
- **Architecture:** Clean Architecture, Onion Architecture, SOLID Principles, Design Patterns.
- **API & Security:** RESTful APIs, JWT Authentication, ASP.NET Identity.
- **Tools & Version Control:** Git, GitHub, Postman, Apidog.

Projects

E-Commerce API – Back-End

.NET 10 | SQL Server | CQRS | Redis | EF Core | MediatR

- Engineered a highly scalable backend with 80+ endpoints utilizing Clean Architecture, Domain-Driven Design (DDD), and the CQRS pattern via MediatR.
- Optimized system performance and data retrieval using Redis caching, Cursor/Offset pagination strategies, and custom EF Core Interceptors.
- Implemented secure JWT authentication with Role-Based Access Control (RBAC), and automated core workflows using Background Hosted Services.

Driver & Vehicle Licensing System (DVLD)

.NET Framework 4.8 | WinForms | SQL Server | ADO.NET

- Engineered a comprehensive desktop application for license and violation management, strictly adhering to a 3-Tier Architecture (Presentation, BLL, DAL) for optimal code modularity.
- Developed robust C# business logic and ADO.NET data access layers to handle complex workflows, including application tracking, test scheduling, and multi-category license issuance.
- Designed an intuitive Windows Forms GUI with advanced data binding and input validation, backed by a highly relational SQL Server database.

Education

Bachelor of Science in Navigation Science & Space Technology

Beni-Suef University *Sep 2023 – Aug 2028 (Expected)*

- Actively applying modern software engineering principles to build scalable .NET and Angular applications while pursuing a rigorous academic degree.
